

Traceability in Golf Course Landscape and Sod Areas

- Proportional dosing and PIQ control in the dosing by conductivity control of fertilisers, plant protection products and growth regulators in intensive horticulture, allow crop factors to be comprehensively controlled. PH control helps stability and effectiveness of nutrients such as Phosphorous and Iron, at the same time helping the maintenance of emitters (drippers, micro-sprinkles) and the uniformity of the irrigation system.
- Control of injected products allows valve to valve inputs and their cost to be known and certified.

ITC Products: Controller 3000, Dositec, Dostec-40, Dostec-50, Multifertic and Pump/Tank Controller Package

PUMP / TANK CONTROLLER PACKAGE

**DOSITEC
DOSING PUMP**

CONTROLLER 3000

**MULTIFERTIC
DOSING PUMP**

**DOSTEC 50
DOSING PUMP**
